

AGES Wave Blocker

pat # 6,764,252

AGES Wave Blockers are made from 100% UV stable polypropylene. They are provided in sections and quickly assembled on site to be filled with 1.5" dia. stone. When filled each unit weights approx. 75 lbs. Units can be butted to one another or connected with cable ties to form long lines or staggered in other patterns. They can be moved by hand as required or left in place for long term applications. The many uses range from permanent vegetation establishment at the water/shore interface (see below) to mini soil retention structures, energy dissipaters in channels and ditches and many others.

- Protect your beach from wake wash and wave action.
- Easy to move to other locations or to make room for kids to play or beach your boat.
- Low cost and easy to ship to any location.
- Assemble and fill with local materials.
- No metal to rust, environmentally friendly & low maintenance.
